

What was the maximum measured temperature? - Solution

David Zelený

```
temp <- read.delim  
('http://www.davidzeleny.net/wiki/lib/exe/fetch.php/recol:data:temperatures.txt')  
  
# Simple version (more typing):  
max (temp$above_150, na.rm = T) # 22.1  
max (temp$below_005, na.rm = T) # 20.5  
max (temp$below_020, na.rm = T) # 19.7  
  
# More advanced option (less typing, more thinking):  
apply (temp[, c('above_150', 'below_005', 'below_020')], 2, max, na.rm = T)  
# S M L  
# 22.1 20.5 19.7
```
